

Arlo

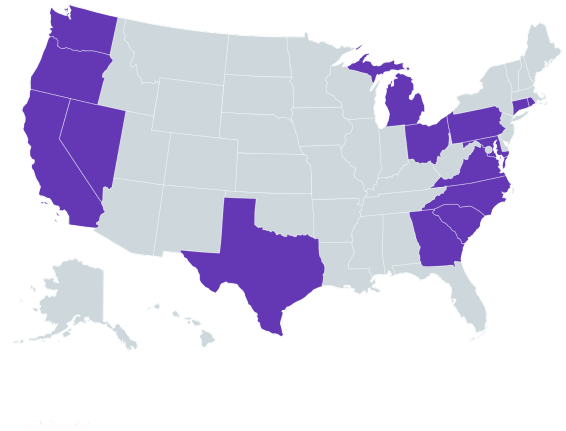

RISK-LIMITING AUDITS

powered by  VotingWorks

Arlo is a secure tool for conducting post-election audits and has been used by 14 states. It was developed by VotingWorks with support from the U.S. Department of Homeland Security.

Post-Election activities Arlo supports:

- Risk-limiting tabulation audits
 - Ballot Polling
 - Ballot Comparison
 - Batch Comparison
 - Hybrid
- Traditional tabulation audits
- RLA/Traditional hybrid audits
- Other random selection type processes
- Recounts

Arlo is flexible and supports any jurisdiction as long as there are paper ballots.

Arlo coordinates the process between the state and local jurisdictions by providing:

- Easy file sharing and combination across jurisdictions
- A structured selection process
- Standardized forms to use to report audit data
- Audit monitoring tools for the audit administrator
- Standardized reporting of outcomes

The code for Arlo is open-source and available for anyone to review and use.

VotingWorks also provides hosting and support to states and local jurisdictions. For more information, contact VotingWorks at 510.426.9991 or rla@vx.support.
